SOLID SURFACE

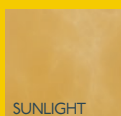

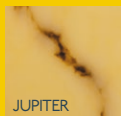

Marblo is a polymer-based hybrid solid surface material, great for residential, commercial, retail and hospitality environments.

Supplied in sheet format, it's easy to work with using conventional woodworking tools and can be engraved or CNC routed, back-lit, jointed and by special order, thermoformed.

Park Royal Hotel designed by IDC Design using Hurricane.

NATURE STORM

The Nature Storm range replicates a natural marble with the advantages of being much easier to handle, non-porous and much more consistent in colour and patternation. This range is very appropriate for backlighting, is supplied with a semi-sheen finish and can be worked with woodworking tools. A thermoformable version can be ordered if a radius is required.

Sheet size is 12mm x 3050mm x 1220mm but bespoke options are available
